SecondBrain

SecondBrain is your personal assistant on your phone.

Four simple ways to use it: talk, share, plan and connect your AI. SecondBrain remembers it all for you.

secondbrainmemory.com

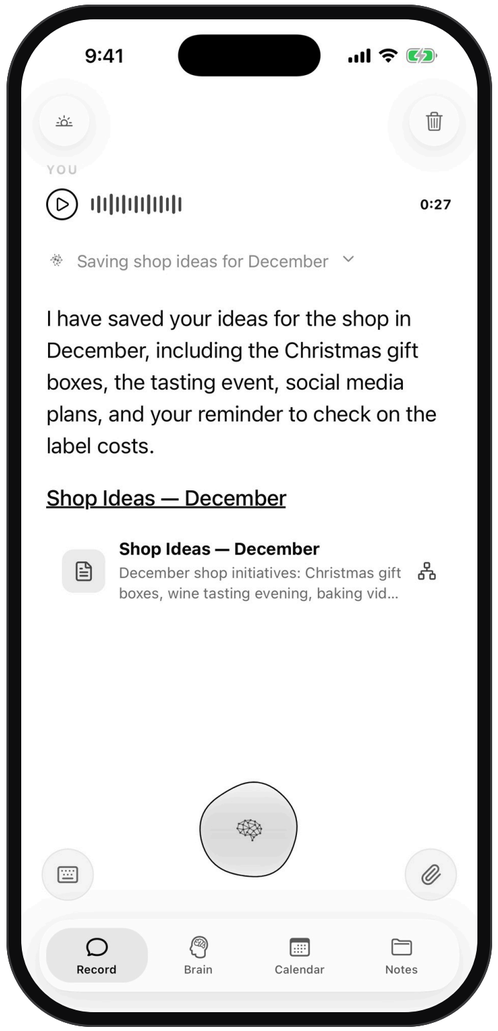

Free on the App Store and Google Play

Brain dump: just talk

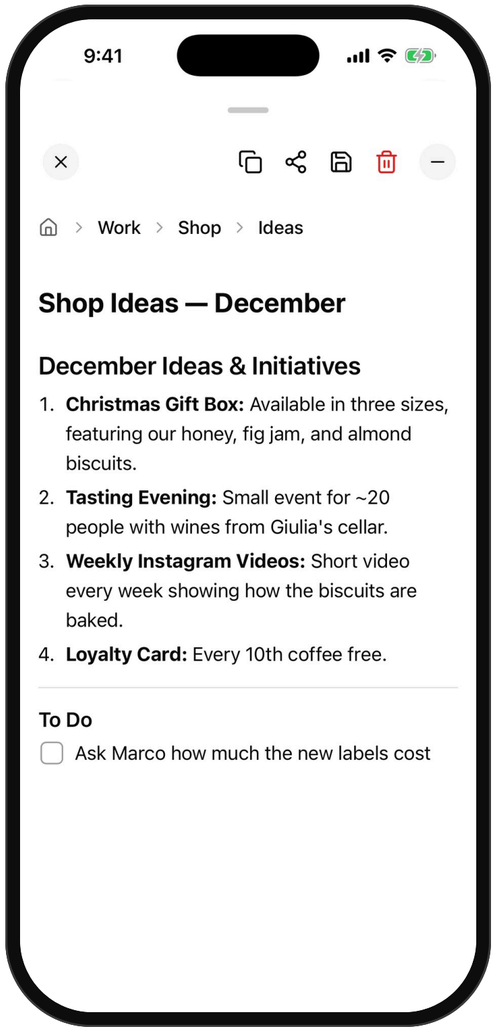

Tap the orb and say everything on your mind, up to 2 minutes. No typing, no folders to pick.

> What Lisa said 0:27
>
> “Okay, some ideas for the shop for December. One: a Christmas gift box, in three sizes… Two: a small tasting evening… Three: a short video every week on Instagram… And four: a loyalty card… Oh, and I should ask Marco how much the new labels cost.”

It answers in seconds

One voice message, one clear note

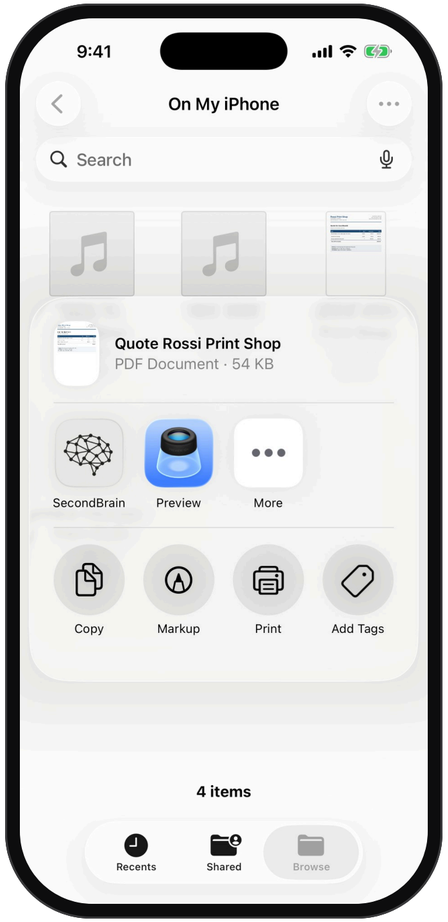

A clean note, already filed

Work › Shop › Ideas, with the to-do

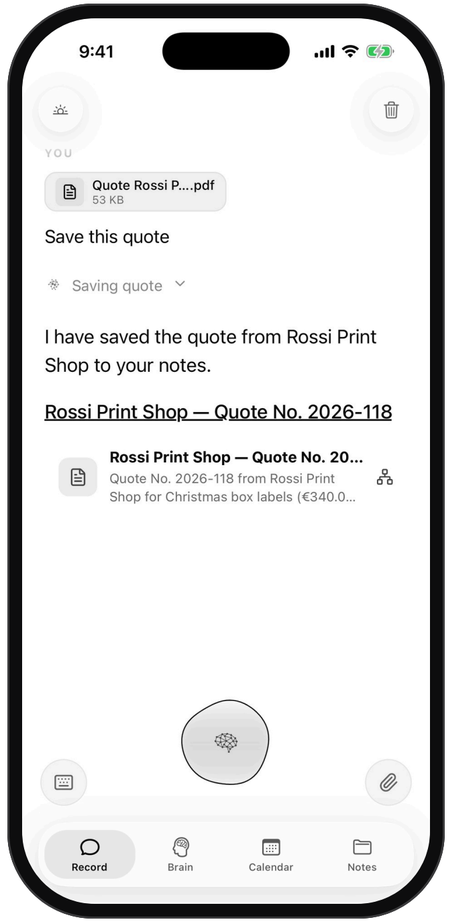

Send it files. Get organized notes.

Share a PDF or a photo from any app. SecondBrain reads it, writes the note, files it and keeps the original on your phone.

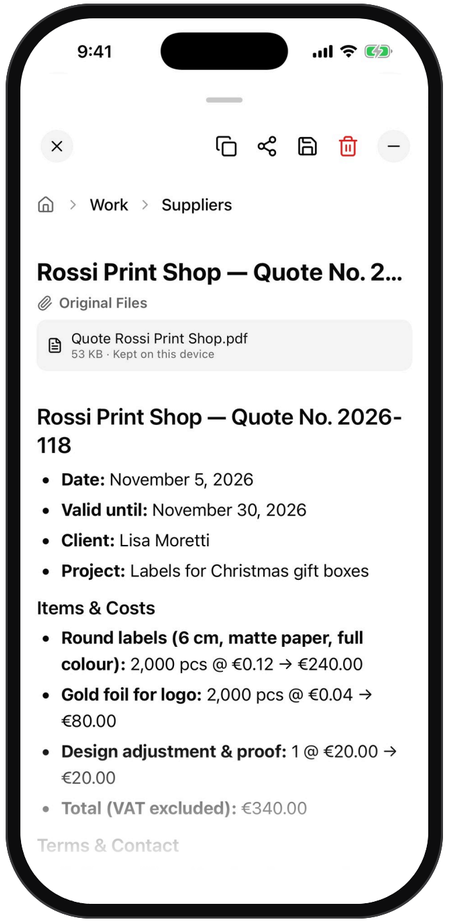

Share → SecondBrain

From Files, Mail, Safari or any app

Add a word if you like

"Save this quote"

Every detail, in order

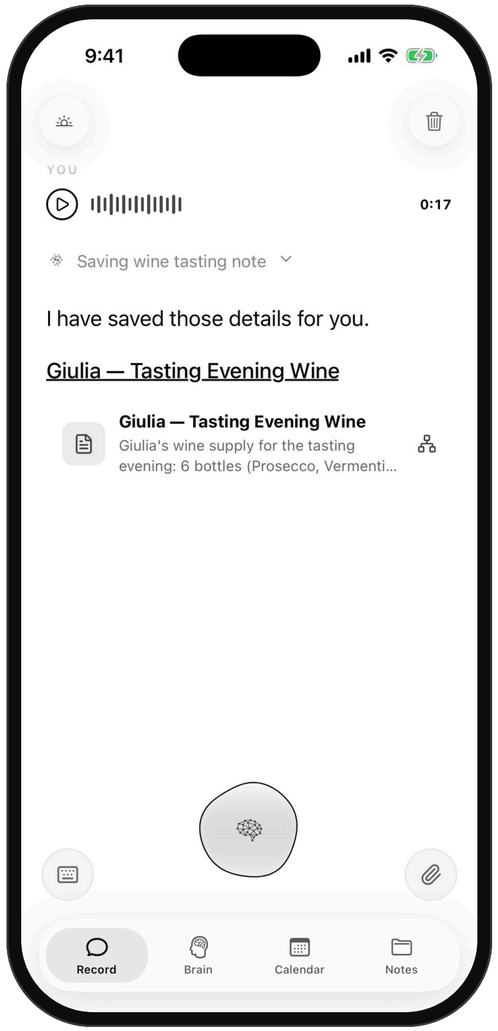

Prices, terms and contact, in Work › Suppliers

Forward voice messages from WhatsApp

No need to listen twice or take notes. SecondBrain listens for you and keeps what matters.

In WhatsApp

1. Hold the voice message
2. Tap Forward, then Share
3. Choose SecondBrain, tap its notification, then Send

Giulia's voice message

17 seconds, straight from the chat

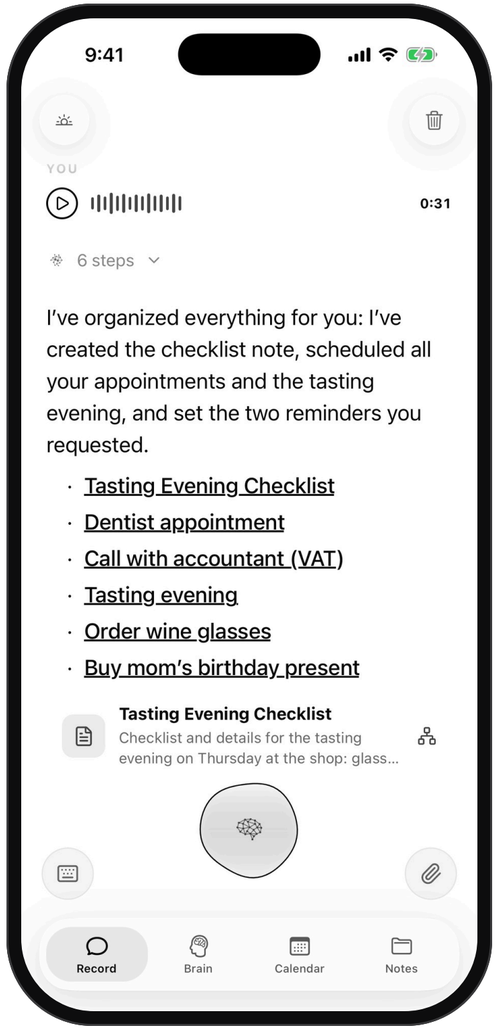

What matters, written down

6 bottles, €12 each, she arrives at 6

From a messy voice memo to your calendar

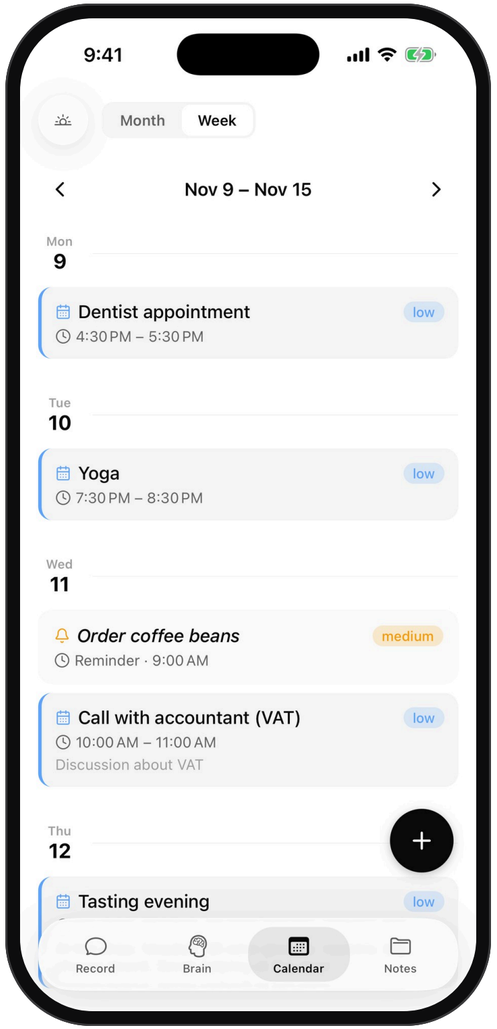

Say it the way it comes out. SecondBrain catches every date and time, even when you change your mind.

> What Lisa said, walking to the shop 0:31
>
> “So, um, a few things for next week. Monday I have the dentist at four. No wait, four thirty. Then, uh, Wednesday at ten, call with the accountant about the VAT. And the tasting evening is Thursday at seven, at the shop. For that we need, um, thirty wine glasses, napkins... Oh, and remind me tomorrow at nine to order the glasses. Also, on the nineteenth at six p.m., remind me to buy mom’s birthday present...”

One memo, everything done

1 note, 3 events, 2 reminders

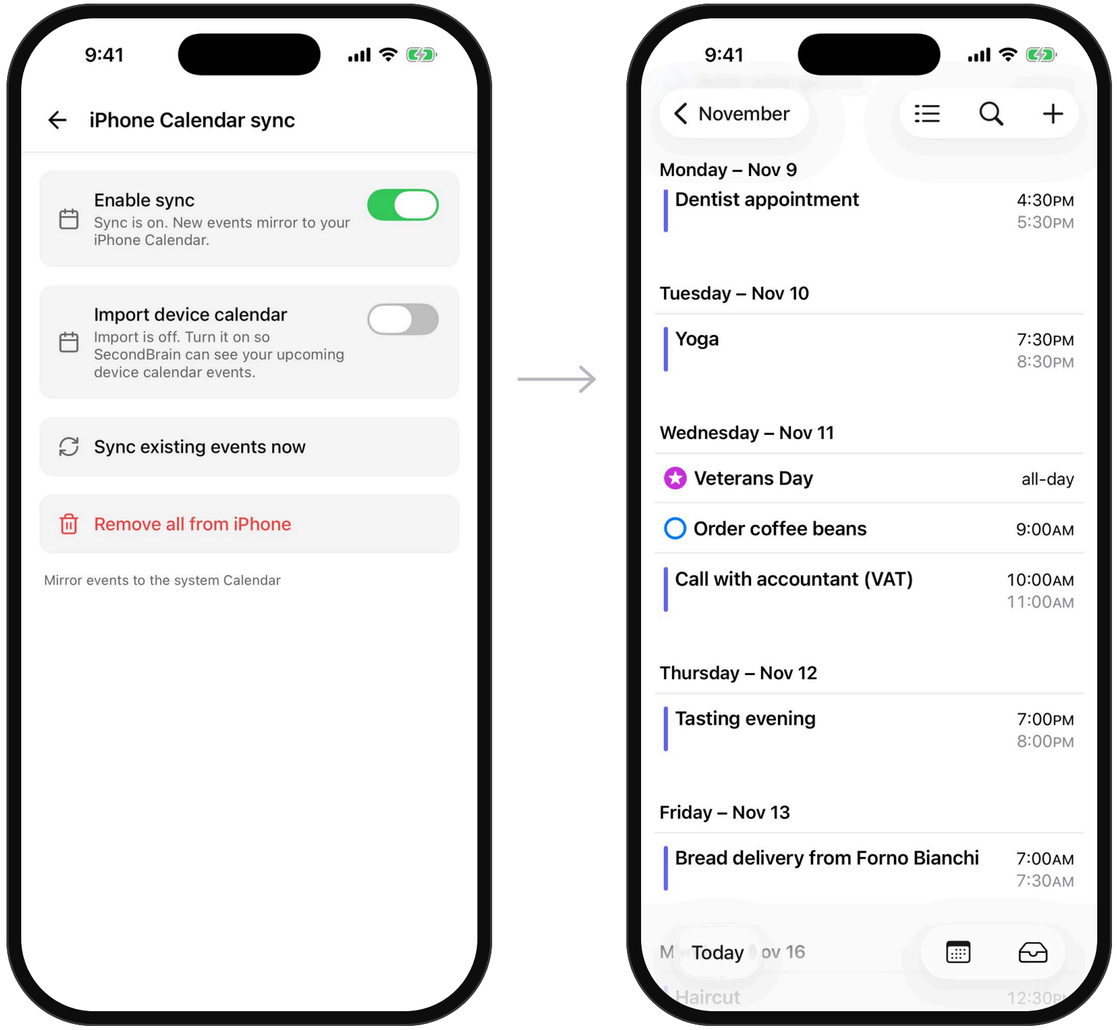

Your week, sorted

Dentist at 4:30, not 4:00

And on your iPhone calendar too

Turn on iPhone Calendar sync once. From then on your events and reminders also appear in Apple Calendar and Reminders.

- Events and reminders, with their alerts
- Works for everything SecondBrain creates
- Off by default, one switch in Settings

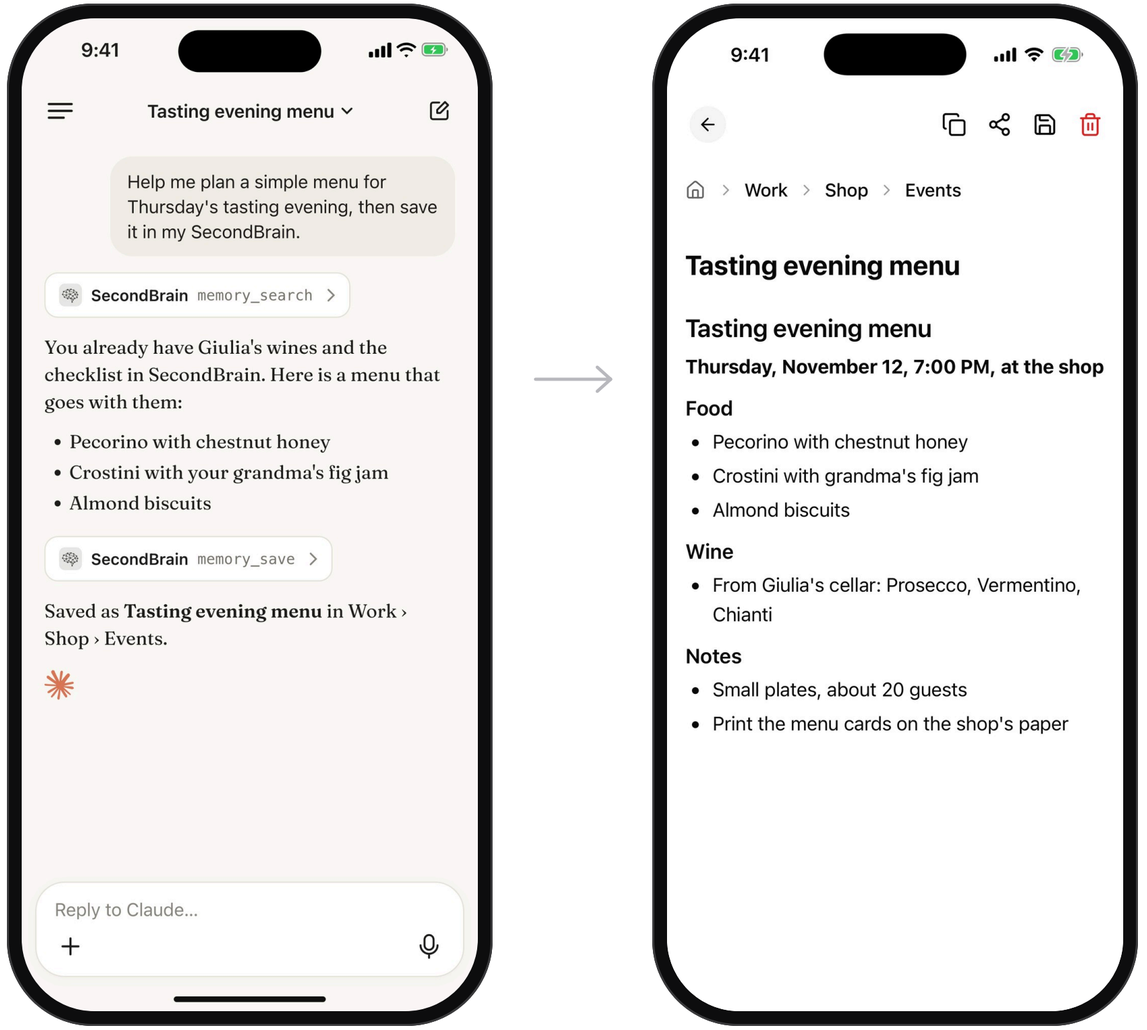

iPhone Calendar sync
One switch in Settings

Apple Calendar
Next to your other events

Tell Claude. It lands in SecondBrain.

Connect Claude or ChatGPT once. What you ask them to remember is saved in your SecondBrain and filed like everything else.

Claude and ChatGPT, one shared memory

In Claude

It reads your notes, then saves the menu

In the SecondBrain app

The same note, in Work › Shop › Events

Ask ChatGPT. It already knows.

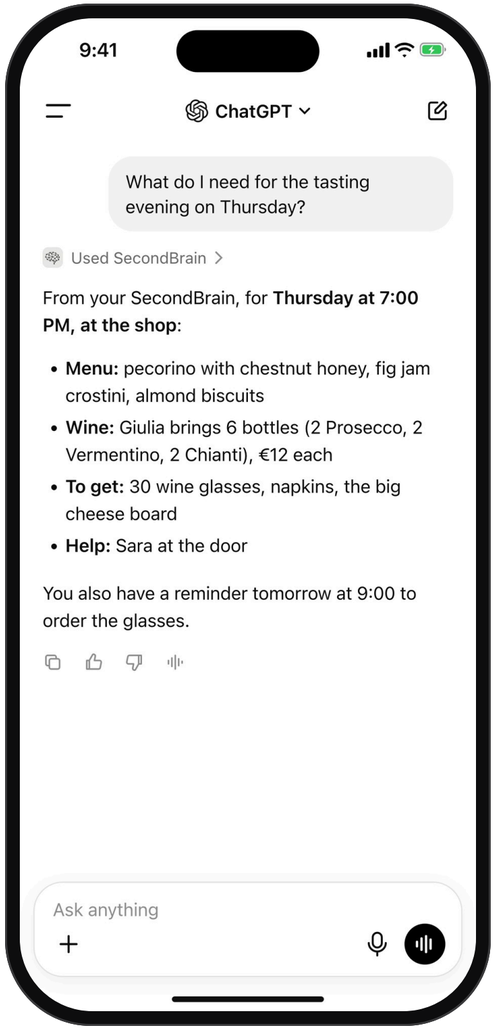

Every assistant you connect reads the same memory. Nothing to copy, nothing to explain again.

ChatGPT answered from three sources:

Lisa's voice memo
the checklist and the reminder

Giulia's WhatsApp voice message
the wines and the price

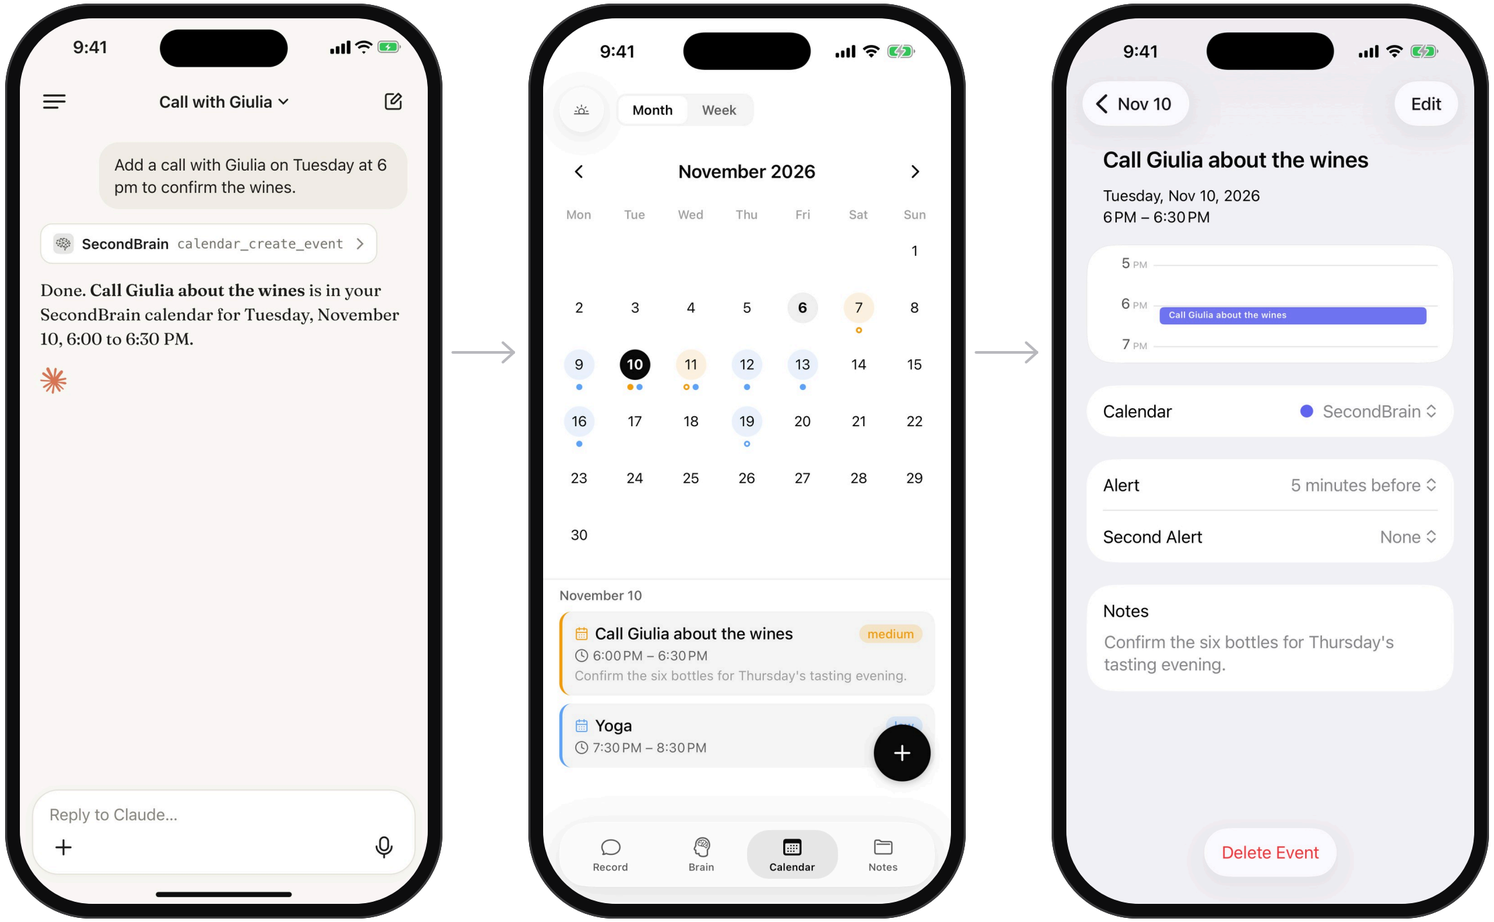

The chat with Claude
the menu

In ChatGPT
One question, the whole picture

Set events on your phone from Claude

Ask for a meeting or a reminder in the chat. It goes into SecondBrain and, with sync on, also lands in your iPhone calendar with its alert as soon as you open the app.

In Claude
"Add a call with Giulia on Tuesday at 6 pm..."

In SecondBrain
Tuesday, 6:00 to 6:30 PM

On your iPhone
Apple Calendar, in the SecondBrain calendar

Connect your AI in two minutes

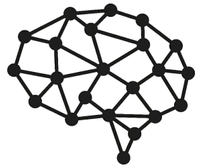

Sign in with the same Apple or Google account you use in the app. No API keys.

Claude

1. Open Plugins (older versions: Customize › Plugins)
2. Add marketplace: fed3c3sa/secondbrain-shared-memory
3. Add SecondBrain Memory, then Connect in its Connectors tab

ChatGPT

1. On chatgpt.com, open Plugins and click +
2. Add custom MCP server: https://mcp.secondbrainmemory.com/mcp with OAuth
3. Choose Create as a plugin, install it, click Connect

You are not meant to remember everything.

SecondBrain remembers for you.
